

Leather Cases

Page 1 of 1

Carry cases made in the UK to a high standard. A choice of three materials and the option of belt or shoulder strap carrying.

Each case has been designed for a particular radio in a style and specification similar to that illustrated. Can be tailored to your specification if you have a particular requirement.

Hard Leather

A strong box-like construction made from tough 2.5mm leather which gives good impact protection. Ideal for hard use in construction and industrial situations. Belt attachment is via a strong 50mm poppered belt loop.

Soft Leather

Less resistant to impact than hard leather but protects the radio from general scratching and damage. The cased radio is smaller package than the hard leather case.. Belt attachment is by a leather covered sprung belt clip

Nylon

Similar to the soft leather case with a webbing belt loop.

Shoulder Strap

Optional extra for carrying without the use of a belt. Adjustable nylon 20mm webbing with small dog clips for rapid attachment to the case.
