

## Kirisun PT3208

Page 1 of 1

### Description

This radio is probably the best value licence free radio available. Built to business radio standards but smaller than the Kenwood TK-3201 and more robust and smaller than the Motorola XTN

Robust with a metal chassis construction under a tough plastic housing it is ideal for daily use.

Simple controls with all the usability of a licensed radio. All the practical features to be found on any '446 radio. DCS as well as CTCSS so you don't have to listen to others. No gimmicks and no useless gadgets. No unnecessary display or buttons. This radio is for communication at work. Press the button and talk..

Rapid intelligent charger and high capacity battery should give around two days use if you forget to charge the battery.

Pre programmed with Kenwood TK3201 settings so it will work straight out of the box with your existing Kenwood radios. We can also program it for you away from the default settings so you can avoid having to hear nearby Kenwood users.

The accessory socket takes most Kenwood and non-Kenwood branded accessories.
